

THE MARKET RISES THANKS TO CASH FLOW, AND FALLS DUE TO CASH FLOW

INVESTMENT STRATEGY

The stock market in recent months has significantly benefited from increased cash flow into the market, driven by the broader economic stimulus policies of the Government.

In the medium term, efforts to activate and amplify large-scale cash flows are key drivers supporting the stock market, alongside the prospect of a market upgrade. *In the short term*, we believe the stock market continues to be supported by several catalysts, *including foreign cash flow* (driven by the market upgrade) *and domestic investor cash flow* (with high levels of investor deposits held at securities companies' accounts).

However, liquidity and cash flow are highly sensitive to macroeconomic variables, particularly external factors (such as tariffs and Fed interest rates), making them more reactive. Consequently, *market corrections are inevitable when one of the primary cash flows participating in the market is impacted* (e.g., margin lending or withdrawals of investor funds to focus on business activities).

Stock Selection:

- **Growth Stocks**: Focus on themes aligned with national development strategies, such as public investment, banking, and real estate. Stocks expected to benefit from the market upgrade prospect include VCB, HPG, VHM, and VCI.
- **Defensive Stocks**: A portfolio of stocks offering high dividend yields.

	Catalyst	Ticker		
Public	High public investment	VCG, CTD		
investment				
Bank	High credit growth supports economic	VCB, TCB, CTG, BID,		
	expansion (including public investment and ACB, STB, HDB, MBB			
	the private sector)			
Electricity	High electricity demand for industrial and QTP, PC1			
	residential consumption			
Market	Stocks meeting the criteria for inclusion in VCB, HPG, VHM			
upgrade	index baskets after a market upgrade			
Others	Stocks with strong fundamentals, returning	PVS, FPT		
	to more reasonable price levels after a			
	market correction

THE MARKET RISES THANKS TO CASH FLOW, AND FALLS DUE TO CASH FLOW

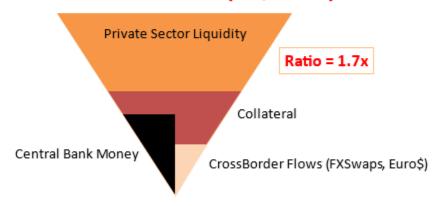

The Liquidity Framework

The Liquidity Framework

The Structure of Global Liquidity

GLOBAL LIQUIDITY (US\$170 tr)

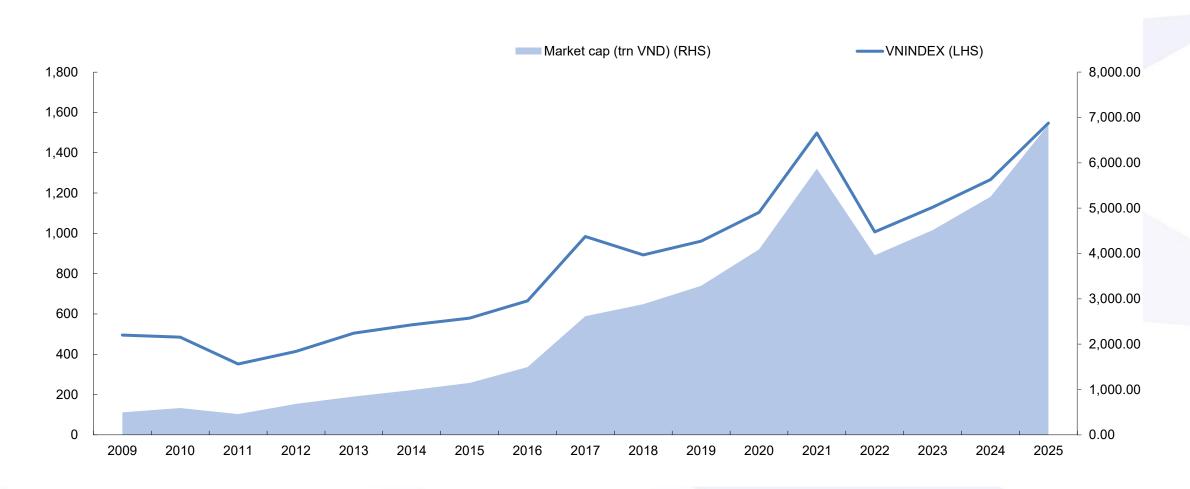

'Shadow' Monetary Base (US\$100 tr)

VNINDEX SURGES TO NEW HIGHS WITH EXPLOSIVE LIQUIDITY

Sources: FiinproX,, GTJASVN Research, dữ liệu ngày 5/8/2025

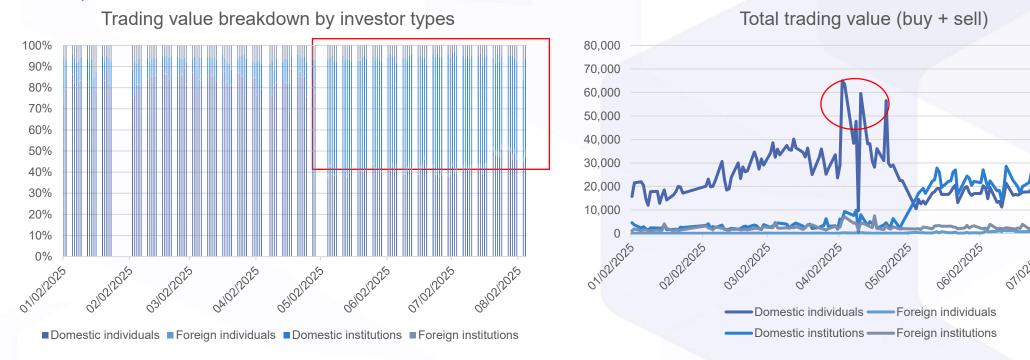

- Observing the recent market participant dynamics, a significant shift in trading structure can be noted, with the **prominence of domestic institutional investors.**
- The cash flow from domestic institutional investors has surged since early May, currently accounting for approximately 40% of the total trading value across the system.
- Domestic cash flow (from both individual and institutional investors) has been driving the VNINDEX's upward trend thus far. Specifically, the rally since early May has been led by domestic institutional cash flow, with the upward momentum subsequently spreading as other investor classes join in.

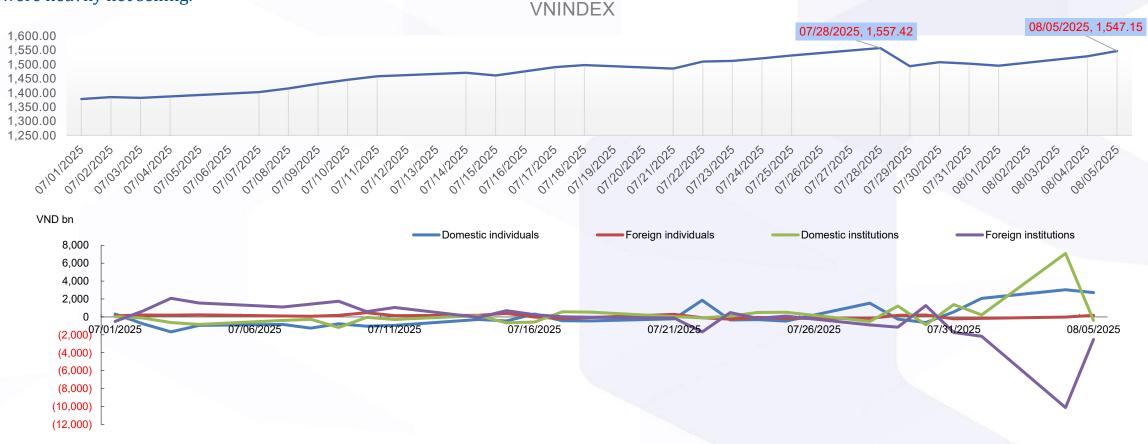

Sources: FiinproX, Bloomberg, GTJASVN Research

• By the end of June, market liquidity was around 20 trillion VND per session, but it has now surged to an average of 48 trillion VND per session in the first 4 trading sessions of August (as of August 5). Observing the behavior of different investor groups, it can be noted that during sessions when the VNINDEX reached higher peaks, domestic cash flow was net buying, while foreign investors, particularly foreign institutions, were heavily net selling.

Sources: FiinproX, GTJASVN Research

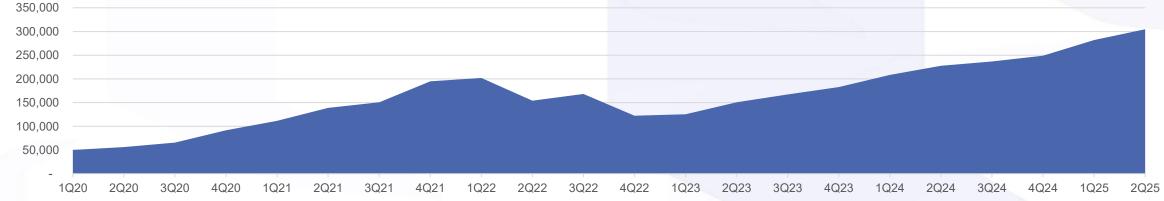

- There remains a substantial amount of cash awaiting market entry, with over 95 trillion VND in investor deposits held at securities companies as of the end of Q2 2025.
- Meanwhile, in the short term, the momentum from margin lending cash flow faces challenges. As of the end of Q2, the total margin lending balance across the system was approximately 300 trillion VND and is estimated to have risen further in July, during a period when the broader market consistently surged.
 Investor deposits for stock trading peaks in Q2.2025

Sources: FiinproX, GTJASVN Research

Market upgrade and foreign inflows

• Despite net buying activity in the first two weeks of July, foreign cash flow has intensified selling in recent days (a significant portion related to strategic investment deals), pushing the total net selling value since the beginning of the year to over 45 trillion VND. In the near term, the market is placing high expectations on the prospect of a stock market upgrade to emerging market status by FTSE in the September review, with anticipated short-term inflows of 300–500 million USD. This is considered a major catalyst to boost market liquidity and the main index. Among these, large-cap stocks with available foreign ownership room, meeting criteria such as VCB, VHM, HPG, are expected to be included in the FTSE EM index basket, stimulating passive cash flow from investment funds.

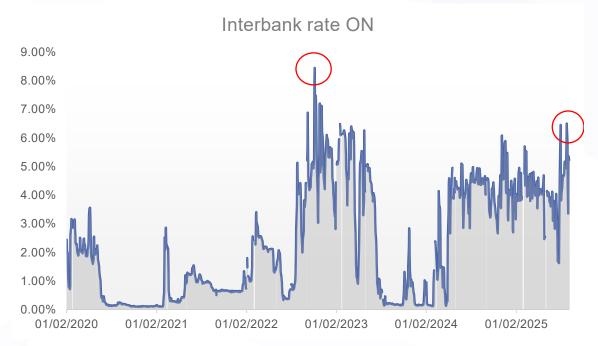

Sources: FiinproX, Bloomberg, GTJASVN Research

INVESTORS ARE SENSITIVE TO INFORMATION, ANY NEGATIVE NEWS COULD TRIGGER A SHORT-TERM SELLOFF

• In addition to the risk of elevated margin lending cash flow at securities companies, which could trigger a short-term sell-off, we highlight a more significant systemic risk. Amid an easing monetary policy and rapid credit expansion into the economy (+9.64% year-to-date), stimulating investment cash flow (including into the stock market) in the short term, the gap between credit and deposit mobilization in the system is increasingly widening, reaching over 1.3 quadrillion VND. In recent days, the rising short-term interbank market interest rates are also a factor that investors should closely monitor.

THE TARIFF ISSUE IS SUBSIDING, BUT LONG-TERM IMPACTS NEED MONITORING

On August 1, US announced new reciprocal tariff rates for its trading partners. Among them, the reciprocal tariff rate for Vietnam is set at 20%.

Countries and Territories	Reciprocal Tariff, Adjusted
China	54%
Laos	40%
Myanmar (Burma)	40%
Canada	35%
India	25%
Mexico	25%
Taiwan (CN)	20%
Vietnam	20%
Cambodia	19%
Indonesia	19%
Malaysia	19%
Philippines	19%
Thailand	19%
Japan	15%
South Korea	15%
United Kingdom	10%
